Abstracts

A Lithium-ion cell is a type of rechargeable battery in which lithium ions move from the negative electrode to the positive electrode during discharge and back when charging. Li-ion batteries use an intercalated lithium compound as one electrode material, compared to the metallic lithium used in a non-rechargeable lithium battery. The electrolyte, which allows for ionic movement, and the two electrodes are the constituent components of a lithium-ion battery cell.

This report elaborates the market size, market characteristics, and market growth of the Lithium-ion Cells industry, and breaks down according to the type, application, and consumption area of Lithium-ion Cells. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
