Abstracts

Lithium Vanadium Phosphate is a compound with a monoclinic structure. It not only has good safety, but also has a higher Li⁺ ion diffusion coefficient, higher discharge voltage and energy density. It has the same advantages as lithium cobalt oxide and lithium iron phosphate and overcame the disadvantages, thus considered to be a better cathode material than LiCoO₂. However, the vanadium material has the disadvantages of high price, difficulty in extracting the precursor and high energy consumption, and there is a possibility that the material synthesis process and the battery discarded can produce toxicity and cause environmental pollution.

This report elaborates the market size, market characteristics, and market growth of the Lithium Vanadium Phosphate industry, and breaks down according to the type, application, and consumption area of Lithium Vanadium Phosphate. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Lithium Vanadium Phosphate in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
