## **Abstracts**

LNG cryogenic pump is a vacuum pump that traps gases and vapours by condensing them on a cold surface, but are only effective on some gases. The effectiveness depends on the freezing and boiling points of the gas relative to the cryopump's temperature. They are sometimes used to block particular contaminants, for example in front of a diffusion pump to trap backstreaming oil, or in front of a McLeod gauge to keep out water.

This report elaborates the market size, market characteristics, and market growth of the Lng Cryogenic Pump industry, and breaks down according to the type, application, and consumption area of Lng Cryogenic Pump. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
