Abstracts

A load bank is a stationary or portable piece of equipment that provides an adjustable resistance that can simulate the actual electrical load the generator, UPS or any other electrical equipment is expected to power. This artificial load is intended to accurately mimic the electrical demands of the equipment(s), specific processes within the plant, or an entire facility. The test is performed to check the performance of the equipment to ensure that it would function efficiently, without break-downs when the actual load is used.
This report elaborates the market size, market characteristics, and market growth of the Load Bank industry, and breaks down according to the type, application, and consumption area of Load Bank. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Load Bank in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
