Logistics is generally the detailed organization and implementation of complex operations. In the general business sense, logistics is the management of logistics between the starting point and the point of consumption to meet the requirements of the customer or company. Resources for logistics management can include material items such as food, materials, animals, equipment and liquids; and intangible items such as time and information. The logistics of physical goods usually involves the integration of information flow, material handling, production, packaging, inventory, transportation, warehousing, and is often safe. Logistics software is software that can monitor and timely feedback all these processes through computer software.
