Abstracts

The Low Code Development Platform (LCDP) is a piece of software that provides an environment for programmers to create application software through a graphical user interface and configuration rather than traditional computer programming. The platform can focus on the design and development of specific types of applications: for example, such a platform can generate fully operational applications or additional coding that needs to be specific to a particular situation. The low-code development platform reduces the number of traditional manual encodings, which accelerates the delivery of business applications. A common benefit is that a wider range of people can contribute to the development of an application - not just applications with formal programming skills. LCDP also reduces the initial cost of setup, training and deployment
This report elaborates the market size, market characteristics, and market growth of the Low-Code Development Platforms industry, and breaks down according to the type, application, and consumption area of Low-Code Development Platforms. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
