Abstracts

Low-power wide area networks is a type of wireless telecommunication wide area network designed to allow long range communications at a low bit rate among things (connected objects), such as sensors operated on a battery. The low power, low bit rate and intended use distinguish this type of network from a wireless WAN that is designed to connect users or businesses, and carry more data, using more power.

This report elaborates the market size, market characteristics, and market growth of the Low-power Wide Area Networks industry, and breaks down according to the type, application, and consumption area of Low-power Wide Area Networks. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Low-power Wide Area Networks in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
