## Abstracts

A solder paste having a melting point of 138 ° C is called a low-temperature solder paste. When the components of the chip cannot withstand a temperature of 200 ° C or higher and a patch reflow process is required, a low-temperature solder paste is used for the soldering process. Protected from high temperature reflow soldering originals and PCBs, it is very popular in the LED industry, and its alloy composition is tin-bismuth alloy. The peak temperature of reflow soldering of low temperature solder paste is 170-200 °C

This report elaborates the market size, market characteristics, and market growth of the Low Temperature Solder Paste Snbis industry, and breaks down according to the type, application, and consumption area of Low Temperature Solder Paste Snbis.
