Abstracts

Lubricating grease is a mixture of three main components: lubricating fluid, performance enhancing additives, and thickener. The lubricating fluid can be petroleum-derived lubricating oil, any of various synthetic lubricating fluids, or vegetable-based oil. The lubricating fluid is usually the majority component in the grease formulation. The additives are typically present in relatively low concentrations, and are added to the grease to provide enhancement in one of multiple performance areas. The thickener is what sets grease apart from liquid lubricants. This component gives the grease the property of consistency, making the product semi-solid rather than liquid. Many different chemical compounds can be used to thicken grease.

This report elaborates the market size, market characteristics, and market growth of the Lubricating Grease industry, and breaks down according to the type, application, and consumption area of Lubricating Grease. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Lubricating Grease in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
