Abstracts

Magnetic components consist of wire or foil wound either onto a core, bobbin or mandrel (for air cored inductors) and may or may not have insulation. For high volume production of very simple components, automation is possible, although the majority of transformers and inductors are quite labour intensive.

This report elaborates the market size, market characteristics, and market growth of the Magnetic Components industry, and breaks down according to the type, application, and consumption area of Magnetic Components. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Magnetic Components in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
