Abstracts

Maleimide is a chemical compound with the formula $H_2C_2(CO)_2NH$. This unsaturated imide is an important building block in organic synthesis. The name is a contraction of maleic acid and imide, the $-C(O)NHC(O)-$ functional group. Maleimides also describes a class of derivatives of the parent maleimide where the NH group is replaced with alkyl or aryl groups such as a methyl or phenyl, respectively. The substituent can also be a small molecule (such as biotin, a fluorescent dye, an oligosaccharide a nucleic acid), a reactive group, or a synthetic polymer such as polyethylene glycol. Human hemoglobin chemically modified with maleimide-polyethylene glycol is a blood substitute called MP4.

This report elaborates the market size, market characteristics, and market growth of the Maleimide industry, and breaks down according to the type, application, and consumption area of Maleimide. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Maleimide in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
