Abstracts

Manganese sulfate (chemical formula $MnSO_4$, formula 151.00), its monohydrate is reddish orthorhombic crystal, relative density is 3.50 and melting point is $700^\circ C$. It exists in the form of a variety of hydrates. Manganese sulfate is a trace element required for crops that synthesize fatty acids, so manganese sulfate can be applied as fertilizer to the soil and can increase production. Manganese sulfate is added to animal feed and has a fattening effect. Manganese sulfate is also a raw material and analytical reagent for the preparation of other manganese salts. Manganese sulfate is also used in industrial production such as electrolytic manganese, dyes, paper, and ceramics. This report elaborates the market size, market characteristics, and market growth of the Manganese Sulfate industry, and breaks down according to the type, application, and consumption area of Manganese Sulfate. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Manganese Sulfate in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
