Abstracts

Manual Torque Multipliers is a tool used to provide a mechanical advantage in applying torque to turn bolts, nuts or other items designed to be actuated by application of torque, such as the actuation of valves, particularly where there are relatively high torque requirements. Torque multipliers can also be used to ease manual tube expansion in drums of water tube boilers or to expand tubes in restricted space. The manually operated torque multipliers made are ideal for applications without a third-party power source – an effective tool for loosening and tightening bolts that is suitable for use anywhere and at any time.

This report elaborates the market size, market characteristics, and market growth of the Manual Torque Multipliers industry, and breaks down according to the type, application, and consumption area of Manual Torque Multipliers. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Manual Torque Multipliers in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
