## **Abstracts**

The principle behind air conditioning is the movement of heat. An air conditioner pulls the heat from the air by transferring the heat in the cabin to the refrigerant gas within the air conditioner. A marine air conditioning system then transfers the heat from the refrigerant gas to the sea water. The process can also be reversed, the air conditioner can pull heat from the sea water and transfer that heat to the cabin. This is called reverse cycle air conditioning.

This report elaborates the market size, market characteristics, and market growth of the Marine Air Conditioning Systems industry, and breaks down according to the type, application, and consumption area of Marine Air Conditioning Systems. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Marine Air Conditioning Systems in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
