## Abstracts

A coating is a layer of a substance that is spread over a surface to protect it from damaging elements in its environment as well as to improve its appearance. Coatings differ in their production methods, applications, and functionalities. The conventional functions of protection and aesthetics are often integrated and extended to meet additional and more specific demands. On the basis of end-use, the coatings are segmented into three major categories: architectural and decorative coatings, industrial coatings, and special purpose coatings. Within these categories, there is a wide variety not only in terms of the properties that the coatings themselves possess but also in terms of the purposes they serve, the technologies used to manufacture them, and the methods used to apply them.

This report elaborates the market size, market characteristics, and market growth of the Marine Coatings industry, and breaks down according to the type, application, and consumption area of Marine Coatings. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Marine Coatings in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
