## Abstracts

Marine power (also sometimes referred to as ocean energy, ocean power, or marine and hydrokinetic energy) refers to the energy carried by ocean waves, tides, salinity, and ocean temperature differences. The movement of water in the world's oceans creates a vast store of kinetic energy, or energy in motion. This energy can be harnessed to generate electricity to power homes, transport and industries.

This report elaborates the market size, market characteristics, and market growth of the Marine Power (Wave and Tidal) industry, and breaks down according to the type, application, and consumption area of Marine Power (Wave and Tidal). The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Marine Power (Wave and Tidal) in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
