Abstracts

Marine seismographic acquisition is the method used for collecting information about the subsea surface. In marine seismic operation, the geophysicists use the same principle used by earthquake seismologists, but relatively low acoustic energy (sound waves) is generated mechanically for collecting the data. The data thus collected provides accurate information about the rock formation and other vital data of the ocean surface. Marine seismic survey is mainly used for oil and gas exploration, but on land they help in locating mines or even to find ground water.

This report elaborates the market size, market characteristics, and market growth of the Marine Seismic Equipment & Acquisition industry, and breaks down according to the type, application, and consumption area of Marine Seismic Equipment & Acquisition. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Marine Seismic Equipment & Acquisition in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
