Abstracts

Medical plastics are polymers used in the healthcare industry. These plastics have excellent flexibility during the manufacturing process. They are lightweight and biocompatible. Production costs are also low. Therefore, medical plastics are used as a substitute for titanium/stainless steel in medical devices. Reinforced materials, especially disposable plastics, improve the performance of a variety of medical tubing. Medical plastics are mainly used in areas where metal parts are used in medical devices. Key applications for medical plastics include catheters and syringes, dental tools, diagnostic instruments, drug delivery devices, implants, medical bags and surgical instruments.

This report elaborates the market size, market characteristics, and market growth of the Medical Plastics industry, and breaks down according to the type, application, and consumption area of Medical Plastics. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Medical Plastics in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
