Abstracts

A memory foam mattress is a mattress made by memory foam. Memory foam consists mainly of polyurethane as well as additional chemicals increasing its viscosity and density. It is often referred to as 'viscoelastic' polyurethane foam, or low-resilience polyurethane foam (LRPU). The foam bubbles or 'cells' are open, effectively creating a matrix through which air can move. Higher-density memory foam softens in reaction to body heat, allowing it to mold to a warm body in a few minutes. Newer foams may recover more quickly to their original shape.

This report elaborates the market size, market characteristics, and market growth of the Memory Foam Mattre industry, and breaks down according to the type, application, and consumption area of Memory Foam Mattre. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Memory Foam Mattre in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
