Abstracts

Memory foam consists mainly of polyurethane as well as additional chemicals increasing its viscosity and density. It is often referred to as 'viscoelastic' polyurethane foam, or low-resilience polyurethane foam (LRPU). The foam bubbles or 'cells' are open, effectively creating a matrix through which air can move. Higher-density memory foam softens in reaction to body heat, allowing it to mold to a warm body in a few minutes. Newer foams may recover more quickly to their original shape. This report elaborates the market size, market characteristics, and market growth of the Memory Foam Mattress & Pillow industry, and breaks down according to the type, application, and consumption area of Memory Foam Mattress & Pillow. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Memory Foam Mattress & Pillow in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
