Abstracts

Memristor is an electrical circuit consists of memory resistor. It limits or regulates the flow of electrical current in a circuit and remembers the amount of charge that has previously flowed through it. Memristor has two key properties, the resistance of memristor changes with the change in the direction of current flowing through it and when the power is turned off, the memristor can retain its resistance value till the time power is resumed again.

This report elaborates the market size, market characteristics, and market growth of the Memristor industry, and breaks down according to the type, application, and consumption area of Memristor. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Memristor in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
