## Abstracts

A metal-coated fiber is a fiber with a metal coating over it. Metals used for coating include aluminum, copper, nickel, silver, and gold. The metal coating layer provides high mechanical strength and improves electric and thermal conductivity. It also eliminates outgassing and increases the temperature range of the fiber. Metal-coated Fibers can be used for various applications, wherein protection from electromagnetic interference, radio frequency interference, and electrostatic discharge is required.

This report elaborates the market size, market characteristics, and market growth of the Metal Coated Fibers industry, and breaks down according to the type, application, and consumption area of Metal Coated Fibers. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Metal Coated Fibers in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
