Abstracts

Methyl beta-D-glucopyranoside, also known as alpha-methyl-D -mannoside or beta -D-glucopyranoside, methyl, belongs to the class of organic compounds known as o-glycosyl compounds. These are glycoside in which a sugar group is bonded through one carbon to another group via a O-glycosidic bond. Methyl beta-D-glucopyranoside exists as a solid, soluble (in water), and a very weakly acidic compound (based on its pKa). Within the cell, methyl beta-D-glucopyranoside is primarily located in the cytoplasm. Outside of the human body, methyl beta-D-glucopyranoside can be found in cereals and cereal products. This makes methyl beta-D-glucopyranoside a potential biomarker for the consumption of this food product.

This report elaborates the market size, market characteristics, and market growth of the Methyl-D-Glucoside industry, and breaks down according to the type, application, and consumption area of Methyl-D-Glucoside. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Methyl-D-Glucoside in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
