Abstracts

Micro electric vehicles are vehicles that are engineered with battery electric propulsion systems with a power rating of 4 kWh-15 kWh. They come in two to four-seater vehicle options. This class of vehicles was earlier considered in the electric vehicles category. However, with increased demand for micro electric vehicles (and rapid market growth), they are now considered an independent category of vehicles.

This report elaborates the market size, market characteristics, and market growth of the Micro Electric Vehicles industry, and breaks down according to the type, application, and consumption area of Micro Electric Vehicles. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Micro Electric Vehicles in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
