Abstracts

Robotic surgery, or robot-assisted surgery, allows doctors to perform many types of complex procedures with more precision, flexibility and control than is possible with conventional techniques. Robotic surgery is usually associated with minimally invasive surgery — procedures performed through tiny incisions. It is also sometimes used in certain traditional open surgical procedures.

This report elaborates the market size, market characteristics, and market growth of the Micro-Surgical Robot industry, and breaks down according to the type, application, and consumption area of Micro-Surgical Robot. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Micro-Surgical Robot in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
