Abstracts

Microbial fermentation APIs are secondary metabolites produced by micro-organisms such as fungi and actinomycetes. The micro-organisms are capable of converting inexpensive carbon sources (starch, glucose, sucrose, etc.) and nitrogen sources (soybean flour, cotton-seed flour, peptone, etc.) into highly valuable API's or key intermediates (such as amino acids, vitamins, antibiotics) in liquid or solid media under certain growth conditions (nutrients, temperature, PH, oxygen supply).

This report elaborates the market size, market characteristics, and market growth of the Microbial Fermentation APIS industry, and breaks down according to the type, application, and consumption area of Microbial Fermentation APIS. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Microbial Fermentation APIS in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
