Abstracts

Microfiber (or microfibre) is synthetic fiber finer than one denier or decitex/thread, having a diameter of less than ten micrometres. This is smaller than the diameter of a strand of silk (which is approximately one denier), which is itself about 1/5 the diameter of a human hair. Yarn is a long continuous length of interlocked fibres, suitable for use in the production of textiles, sewing, crocheting, knitting, weaving, embroidery, or ropemaking.

This report elaborates the market size, market characteristics, and market growth of the Microfiber Yarns industry, and breaks down according to the type, application, and consumption area of Microfiber Yarns.
