Abstracts

A microgrid is an integrated energy system with local distributed energy resources (DER) such as local loads, power generation assets, and possibly power storage devices such as batteries or fuel cells. Microgrid systems are typically capable of operating in an 'island' (non-grid) or grid connection mode.

This report elaborates the market size, market characteristics, and market growth of the Microgrid Control Systems industry, and breaks down according to the type, application, and consumption area of Microgrid Control Systems. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Microgrid Control Systems in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
