## Abstracts

A microprocessor is a kind of computer processor, which integrates the functions of a computer's central processing unit (CPU) on a single integrated circuit or at most a few integrated circuits. The microprocessor is a multi-purpose, programmable device that accepts digital data as input, processes according to instructions stored in memory, and outputs the results. It is an example of sequential digital logic, as it has internal memory. Microprocessors operate on numbers and symbols represented in the binary numeral system.

This report elaborates the market size, market characteristics, and market growth of the Microprocessor industry, and breaks down according to the type, application, and consumption area of Microprocessor. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Microprocessor in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
