## Abstracts

Injection molding is the most commonly used manufacturing process for the fabrication of plastic parts. Injection molding is used to manufacture a wide variety of products, which vary considerably in their dimensions, complex structures, and end-use applications. The injection molding is done by an injection molding machine and requires plastic and the typical raw material, and a shaping mold. The molding machine melts the plastic, which is then injected into the mold, where it cools and solidifies into the final part.

This report elaborates the market size, market characteristics, and market growth of the Miniature Injection Molding Machine industry, and breaks down according to the type, application, and consumption area of Miniature Injection Molding Machine.
