## Abstracts

Mining can be carried out at the surface as well as underground. Rock drills, scoops, loader, hydraulic shovels, and draglines are used constantly in the operations of mining which causes wear and tear. This causes decrease in downtime and life of the equipment. Hence, mining lubricants play an important role in mining activities. In mining, the anti-wear performance and the need of good corrosion protection are mainly required to protect the metal surface. The mining lubricants are used to reduce costs by extending drain intervals, improving energy efficiency, and increasing equipment life. This report elaborates the market size, market characteristics, and market growth of the Mining Lubricant industry, and breaks down according to the type, application, and consumption area of Mining Lubricant. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Mining Lubricant in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
