Abstracts

Mining Metals are essential for many other industries. For example, iron ore for making steel is essential in the construction and machinery industry. The most valued metals are the so called precious metals. These include, first of all, gold, silver, and the platinum group. Gold and silver have always been signs of wealth, and still are important drivers in the financial world. Historic price developments of precious metals are among the top statistics of this branch. Less valued, but highly sought after, are the so called base metals. Iron, lead, nickel, zinc and copper are the best known base metals and are utilized in everyday life.

This report elaborates the market size, market characteristics, and market growth of the Mining Metals industry, and breaks down according to the type, application, and consumption area of Mining Metals. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Mining Metals in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
