## Abstracts

Mining activities produce large amount of mining waste during extraction, beneficiation, and processing of minerals. Extraction process is the first phase of mining activity. It comprises initial removal of the mineral ore from the earth's crust. The process is mainly done by the help of blasting. This creates large amount of wastes such as debris, soil, and other components that are unusable in the mining industry. This is one way in which the industry generates waste. Mining waste requires effective management in order to ensure long-term utilization of storage and disposal facilities in order to prevent or at least minimize the contamination of air, soil, and water from waste.

This report elaborates the market size, market characteristics, and market growth of the Mining Waste Management industry, and breaks down according to the type, application, and consumption area of Mining Waste Management. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Mining Waste Management in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
