Abstracts

Mitoquinone mesylate, also known as MitoQ or MitoQ10; is a mitochondria-targeted antioxidant designed to accumulate within mitochondria in vivo in order to protect against oxidative damage. MitoQ comprises a positively charged lipophilic cation that drives its extensive accumulation within the negatively charged mitochondria inside cells. The active antioxidant component of MitoQ is ubiquinone, which is identical to the active antioxidant in Coenzyme Q10. It is this approximately thousand-fold greater concentration of MitoQ within mitochondria that makes it more effective at preventing mitochondrial oxidative damage when compared to untargeted antioxidants such as Coenzyme Q10.

This report elaborates the market size, market characteristics, and market growth of the MitoQ (CAS 845959-50-4) industry, and breaks down according to the type, application, and consumption area of MitoQ (CAS 845959-50-4). The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for MitoQ (CAS 845959-50-4) in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
