Abstracts

Mobile mapping is the process of collecting geospatial data from a mobile vehicle, typically fitted with a range of photographic, radar, laser, LiDAR or any number of remote sensing systems. Such systems are composed of an integrated array of time synchronised navigation sensors and imaging sensors mounted on a mobile platform.

This report elaborates the market size, market characteristics, and market growth of the Mobile Mapping industry, and breaks down according to the type, application, and consumption area of Mobile Mapping. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
