Abstracts

A clean room is any given containment space that is designed to reduce particulate contamination and control other environmental parameters such as temperature, humidity and pressure. The key component is a high efficiency particulate air (HEPA) filter for capturing particles of 0.3 microns or larger. All air delivered to the clean room passes through the HEPA filter, and in some cases where strict cleaning performance is required, an ultra low particulate air (ULPA) filter is used.

This report elaborates the market size, market characteristics, and market growth of the Modular Cleanroom Technology industry, and breaks down according to the type, application, and consumption area of Modular Cleanroom Technology. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Modular Cleanroom Technology in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
