Abstracts

A modular data center system is a portable method of deploying data center capacity. A modular data center can be placed anywhere that requires data capacity. The modular data center system consists of dedicated engineering modules and components that provide scalable data center capacity through a variety of power and cooling options. Modules can be transported, added, integrated or retrofitted into existing data centers or combined into modular systems. A modular data center is usually composed of standardized components.

This report elaborates the market size, market characteristics, and market growth of the Modular Data Centers industry, and breaks down according to the type, application, and consumption area of Modular Data Centers. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Modular Data Centers in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
