## Abstracts

Molybdenum is a chemical element with symbol Mo and atomic number 42.

Molybdenum does not occur naturally as a free metal on Earth; it is found only in various oxidation states in minerals. The free element, a silvery metal with a gray cast, has the sixth-highest melting point of any element. It readily forms hard, stable carbides in alloys, and for this reason most of world production of the element (about 80%) is used in steel alloys, including high-strength alloys and superalloys.

This report elaborates the market size, market characteristics, and market growth of the Molybdenum Rod industry, and breaks down according to the type, application, and consumption area of Molybdenum Rod. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Molybdenum Rod in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
