## **Abstracts**

Monitor arms can be used with either fixed height or sit stand desks and are an excellent way to achieve the optimal level of adjustability recommended by ergonomists. When used appropriately, monitor arms can help workers avoid the development of musculoskeletal disorders (MSD), aid in the management of existing MSD, and help alleviate eye strain associated with long hours of computer use in the office. Monitor arms enable users to maintain neutral position of their shoulders, neck and back by allowing them to position their computer screen in the perfect location and angle for their height and the type of task they are performing.

This report elaborates the market size, market characteristics, and market growth of the Monitor Arms industry, and breaks down according to the type, application, and consumption area of Monitor Arms. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Monitor Arms in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
