## Abstracts

Motion tracking, or mo-cap, is a process of digital recording of people's or objects' movements. Motion capture technology is widely used in entertainment, notably in gaming industry and filmmaking. It is also called performance capture if it refers to designing more complex patterns, such as facial expressions or finger movements. The actions of people are recorded and this information is used to create a 3D digital model. The movements are scanned many times per second and are broadcasted to the digital environment. As a result, the character reproduces the human's movements in real time.

This report elaborates the market size, market characteristics, and market growth of the Motion Tracking System industry, and breaks down according to the type, application, and consumption area of Motion Tracking System. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
