## **Abstracts**

For a long time, messenger RNA (mRNA) was thought to be a poor choice for a therapeutic agent given its relatively short half-life and its immunogenicity. But mRNA is rather versatile and offers a range of advantages. mRNA lacks genomic integration and its use results in transient expression of the encoded protein. This favorable safety profile makes mRNA especially attractive for vaccines and gene editing. mRNA is well defined chemically which ensures reproducible manufacturing at high yield, purity and activity. Improvements of lipid nanoparticle formulations as a vehicle for in vivo systemic delivery of mRNA has greatly favored the development of in vivo transfection strategies. This report elaborates the market size, market characteristics, and market growth of the mRNA Vaccines & Therapeutics industry, and breaks down according to the type, application, and consumption area of mRNA Vaccines & Therapeutics. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for mRNA Vaccines & Therapeutics in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
