Abstracts

Multi conductor cable is “an electrical cable which consists of multiple numbers of conductors with insulation sheaths placed in a single cable”. Strands of annealed tinned copper wires are used in construction of multi conductor cable. The copper wire conductors have polyethylene insulation placed inside a shield made polyester aluminum. This arrangement along with stranded tinned copper drain wire is placed in an outer sheath and forms a “multi-conductor cable”. In general, multi conductor cables are available in the configurations of 14, 16, 18, 20, 22, and 24 AWG (American Wire Gauge) systems.

This report elaborates the market size, market characteristics, and market growth of the Multiconductor Cable industry, and breaks down according to the type, application, and consumption area of Multiconductor Cable. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Multiconductor Cable in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
