Abstracts

Multiplex assay is a procedure in which various analytes (such as proteins, biomolecules, growth factors, cytokines, chemokines, and others) are profiled by detecting and quantifying them simultaneously. This assay is used to amplify multiple targets in a polymerase chain reaction (PCR) and collect more information from minute quantities of proteins or other analytes in lesser time as compared to conventional methods such as ELISA.

This report elaborates the market size, market characteristics, and market growth of the Multiplex Detection Immunoassay industry, and breaks down according to the type, application, and consumption area of Multiplex Detection Immunoassay. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
