Abstracts

MVR is called Mechanical Vapor Recompression. It uses the centrifugal compressor to re-compress the secondary vapor (low temperature and low pressure) which is evaporated from the liquid material to raise its temperature and pressure, so as to reuse it as a heating source to evaporate the liquid material again. The process is to convert a small amount of electric energy to more heat energy. Theoretically, compared with multi-effect evaporator, it can save more than 50%~80% energy consumption and 90% cooling water.

This report elaborates the market size, market characteristics, and market growth of the MVR Evaporator industry, and breaks down according to the type, application, and consumption area of MVR Evaporator. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for MVR Evaporator in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
