Abstracts

Myocardial infarction or heart attack is caused due to blockage in the supply of oxygen-rich blood to heart muscles, resulting in permanent heart muscle injury and death of cells. The blockage is due to atherosclerosis, a process in which the plaque (fatty patches) is formed on the inside wall of the coronary artery or one of its smaller branches. If the plaque is ruptured, the blood clot is formed inside the artery blocking the blood flow. People with risk factors such as smoking, dyslipidemia, diabetes are more prone to myocardial infarction.

This report elaborates the market size, market characteristics, and market growth of the Myocardial Infarction Treatment industry, and breaks down according to the type, application, and consumption area of Myocardial Infarction Treatment. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Myocardial Infarction Treatment in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
