Abstracts

A nanocapsule is a nanoscale shell made from a nontoxic polymer. They are vesicular systems made of a polymeric membrane which encapsulates an inner liquid core at the nanoscale. Nanocapsules have many uses, including promising medical applications for drug delivery, food enhancement, nutraceuticals, and for self-healing materials. The benefits of encapsulation methods are for protection of these substances to protect in the adverse environment, for controlled release, and for precision targeting. Nanocapsules can potentially be used as MRI-guided nanorobots or nanobots, although challenges remain.

This report elaborates the market size, market characteristics, and market growth of the Nanocapsules industry, and breaks down according to the type, application, and consumption area of Nanocapsules. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.
