Abstracts

The technology of creating nanosized machines is called nanorobotics. This term, nanorobotics, refers to the section of nanotechnology that involves engineering, designing, and building of nanorobots. Nanorobots are devices ranging in size from 0.1 to 10 μm that are composed of nanoscale or molecular components. These devices can be injected into the patient to perform diagnosis or treatment on a cellular level. This report elaborates the market size, market characteristics, and market growth of the Nanorobots industry, and breaks down according to the type, application, and consumption area of Nanorobots. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Nanorobots in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
