Abstracts

Naphthenic oil is extracted from naphthenic crude oil. Compared with paraffin base oil, petroleum naphthenic oil has less resources and its reserves only account for 2.2% of the world's proven oil reserves. It is a scarce resource. Naphthenic process oils are light-colored and non-staining compounds that have properties, such as thermal stability, excellent compatibility with synthetic elastomers, greater solvating power than paraffinic oils, and low viscosity.

This report elaborates the market size, market characteristics, and market growth of the Naphthenic Process Oil industry, and breaks down according to the type, application, and consumption area of Naphthenic Process Oil. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Naphthenic Process Oil in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
