## Abstracts

Nattokinase is an enzyme extracted and purified from a Japanese food called natto. Natto is made from fermented soybeans and has been eaten in Japan for about a thousand years. Natto is produced by fermentation by adding the bacterium *Bacillus natto* to boiled soybeans. Nattokinase is produced by the bacterium acting on the soybeans. While other soy foods contain enzymes, it is only the natto preparation that contains the specific nattokinase enzyme.

This report elaborates the market size, market characteristics, and market growth of the Nattokinase industry, and breaks down according to the type, application, and consumption area of Nattokinase. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Nattokinase in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
