Abstracts

Navigation Suits are personal closed equipment that assure the astronauts' life activities and work capabilities. The hazards to the human body include environmental factors such as vacuum, high and low temperature, solar radiation, and micro-meteors that can protect the space. In a vacuum environment, the nitrogen contained in human blood turns into gas and expands the volume. If a person does not wear a gas-tight Navigation Suits, he or she will be at risk because of a great pressure difference between the inside and outside. Space suits are multi-functional garments developed on the basis of pilots' cloaks. The early Navigation Suits could only be used by astronauts in the cockpit of the spacecraft, and space suits for extravehicular use were developed. Modern modern Navigation Suits for space use have a liquid cooling structure that allows astronauts to embark on cabin activities or visit the moon.

This report elaborates the market size, market characteristics, and market growth of the Navigation Suits industry, and breaks down according to the type, application, and consumption area of Navigation Suits. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Navigation Suits in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.

In addition, chapters 8-12 consider the impact of COVID-19 on the regional economy.
